Would I Lie to You? Web App: Change Request 01

Request

Item	Detail
Change request	CR-01
Raised by	Abdul-Haque Mohammed (project manager)
Date raised	Thursday 12 November 2026
Requested of	Graham Fry (client)
Status	Approved by Graham Fry, Thursday 12 November 2026

Change: add a third way to get lies: a free AI model that runs on the laptop itself, alongside Claude (online, paid per use) and the built-in lie bank (offline).

Why: Claude needs an API key with credit. A local model gives AI-written lies for free, with no internet and no account, so the game can be played anywhere without running costs.

What changes for players: the setup screen gets one choice, "Where do lies come from?", with three options: Claude, Local AI, or Lie bank. If the chosen AI is not available, the game falls back to the lie bank and says so, exactly as it does for Claude today.

How it works: the laptop runs Ollama, a free program that hosts open-source AI models, with a small model such as Llama 3.2. The game sends it the same prompt it sends Claude. No model is trained or built for this change.

Impact

Area	Impact
Time	About 1 hour, done inside Friday 13 November's development day. Handover date does not move
Cost	Free. Ollama and the model cost nothing to use
Laptop needs	Ollama installed and a model downloaded (about 2 GB disk). 8 GB of memory runs the small model; 16 GB is comfortable
Lie quality	Lower than Claude. Small local models write plainer, easier-to-spot lies. Claude stays the default
Risk	Low. If the local model is missing or slow, the game falls back to the lie bank

Documents that change if approved

Document	Change
WILTY (BRD)	New FR24: a choice of lie source (Claude, local AI, lie bank). FR21 offline toggle becomes one of the three options. Version goes up
WILTY (TEST REQUIREMENTS)	New tests: local AI chosen with Ollama running; local AI chosen with Ollama not running (falls back to the lie bank)
WILTY (MODULE BREAKDOWN)	New module `local_client.py` beside `claude_client.py`
WILTY (PROJECT PLAN)	Friday's development deliverables include the local AI option (already listed)
UAT scenarios	New UAT9: play a full game using the local AI

Client decision

Please tick one option and return by the end of Friday 13 November so it can be built in that day's development.

- ☑ **Approve:** add the local AI option as described
- ☐ **Approve with changes:** (write the changes below)
- ☐ **Reject:** keep Claude and the lie bank only

Field	Entry
Changes or comments	None
Client name	Graham Fry
Signature	Approval confirmed verbally; signature to follow
Date	12 November 2026

Note: this project is a simulation of a real client engagement, run as a work experience exercise. Graham Fry acts as the client. All dates, check-ins and sign-offs are illustrative, not real commitments.
