Would I Lie to You? Web App: Client Testing Pack

What this pack is for

Graham, thank you for testing the game. Client testing runs **Monday 16 and Tuesday 17 November 2026**. You and up to 5 players play real games, check each scenario below, and note anything that is wrong or could be better. Issues found on Monday are fixed the same day so you can retest them on Tuesday.

Item	Detail
Testing dates	Monday 16 to Tuesday 17 November 2026
Testers	Graham Fry plus up to 5 players (6 people make one full game)
You need	A Mac laptop, about 2 hours across the two days
Contact	Abdul-Haque Mohammed (project manager and developer)
Check-ins	15 minutes at the end of each testing day

Setting up (one time, about 15 minutes)

If Abdul-Haque sets the laptop up for you, skip to "Starting the game".

1. Copy the WILTY folder onto the laptop.
2. Install Ollama from https://ollama.com and open it. It runs in the menu bar.
3. Open Terminal and run `ollama pull llama3.2:3b`. This downloads the free AI model (about 2 GB). On an 8 GB laptop use `ollama pull llama3.2:1b` instead and tell Abdul-Haque.
4. In Terminal, run these one at a time:

```
cd "path/to/WILTY"
python3 -m venv .venv
source .venv/bin/activate
pip install -r requirements.txt
```

Starting the game

1. Make sure Ollama is open (menu bar icon).
2. In Terminal, inside the WILTY folder: `source .venv/bin/activate`, then `python app.py`.
3. Open http://127.0.0.1:5050 in Chrome, Safari or Edge.
4. To stop, press `Ctrl + C` in Terminal.

The WILTY (USER GUIDE) explains how to play.

Scenarios

Tick Pass or Fail for each. If anything fails or feels wrong, fill in a feedback form.

Scenario	Passes if	Result
UAT1 Set up a 3v3 game and enter everyone's stories	No one sees another player's stories	☐ Pass ☐ Fail
UAT2 Play a full 6-round game with Local AI	Lies feel believable; scores and winner are right	☐ Pass ☐ Fail
UAT3 Play a full game with the Lie bank	Game works with no AI and no internet	☐ Pass ☐ Fail
UAT4 Finish 6 rounds with level scores	Sudden death starts and produces a winner	☐ Pass ☐ Fail
UAT5 Guess early with Ready to Guess, and once let the timer run out	Both lead to the guess screen; a beep plays at 0:00	☐ Pass ☐ Fail
UAT6 Type a wrong key (for example X) as a guess	The game asks again; no points change	☐ Pass ☐ Fail
UAT7 Play 3 games in a row	No lie repeats	☐ Pass ☐ Fail
UAT8 Run a game in Test mode	TRUTH or LIE shows on screen; "TEST GAME" banner shows	☐ Pass ☐ Fail
UAT9 Play a game with Local AI while Ollama is closed	The game says it couldn't reach the local AI and uses the lie bank	☐ Pass ☐ Fail

Tip for UAT4: to force level scores quickly, use Test mode and guess right every round.

Feedback form

Copy this table once per issue.

Field	Entry
Tester name	
Date and time	
Scenario (UAT1 to UAT9)	
What happened	
What you expected	
Screenshot attached?	Yes / No
How serious?	Critical / Major / Minor

How serious is it?

Level	Meaning	Fixed by
Critical	The game cannot be finished, scores are wrong, or the guessing team can see the answer	The same day
Major	Something does not work as agreed, but there is a way round it	Before handover
Minor	Wording, layout or look	Agreed at the Tuesday go/no-go

When testing is finished

Testing ends when every scenario has passed, no Critical or Major issues are open, and you confirm in writing (an email is fine). At the Tuesday 17 November check-in we agree go or no-go for handover.

Note: this project is a simulation of a real client engagement, run as a work experience exercise. Graham Fry acts as the client. All dates, check-ins and sign-offs are illustrative, not real commitments.
