Would I Lie to You? Web App: User Guide

The game in one minute

Two teams of 3 take turns. Each round, one player reads out a statement about themselves. It is either one of their own true stories or a lie written by the AI, and only the speaker knows which. The other team has up to 10 minutes to question them, then guesses Truth or Lie. The team with the most points after 6 rounds wins.

What you need

- 6 players, split into two teams of 3
- One laptop with the game running (see the WILTY (UAT PACK) or the README to start it)
- For AI lies: Ollama open on the laptop. Without it, the game uses its built-in lie bank

1. Set up the game

1. Enter the two team names and the 3 players in each team.
2. Choose where lies come from:
    - **Local AI** (default): a free AI on the laptop writes new lies each game.
    - **Lie bank**: lies come from the game's built-in list. Use this if Ollama isn't installed.
3. Leave **Test mode** off for a real game. Test mode shows the answer on screen and is only for checking the game works.
4. Click **Start**.

2. Write your true stories

The laptop is passed to each player in turn. When the screen says "Pass the laptop to [your name]", everyone else looks away.

1. Click **I'm [your name], show the form**.
2. Write 2 true stories about yourself, then click **Save and pass on**.

Good stories are true, short and a bit odd: "I once got stuck on a Ferris wheel for forty minutes at Barry Island." The stranger the true story, the harder it is to spot.

3. Play a round

1. The screen names the speaker. **The other team looks away.**
2. The speaker clicks **Reveal statement**, reads it to themselves, then clicks **Hide statement**. It might be one of their stories, or a lie they have never seen.
3. The speaker presses **Space** to start the 10-minute timer. (Space only works once the statement is hidden.)

4. The speaker reads the statement out loud and the other team asks questions. The speaker must defend it either way.
5. When the guessing team is ready, they click **Ready to Guess**. If the timer runs out, the guess screen opens by itself with a beep.
6. The guessing team types **T** for truth or **L** for lie, clicks **Confirm guess**, then confirms again.
7. The answer is revealed and the point is given out. Click **Next round**.

Scoring

What happens	Who gets the point
Guessing team is right	Guessing team +1
Guessing team is wrong	Speaker's team +1

Every round gives exactly one point, so scores never go below zero.

Sudden death

If the scores are level after 6 rounds, each team plays one more round. If one team is ahead after that pair, they win. If it's still level, another pair is played, until there is a winner.

Quick rules

- Every player speaks once in the 6 rounds; teams take turns.
- Each round is a coin flip between a true story and a lie, so a game can have any number of lies.
- A true story is never used twice in a game, and the same lie never comes up twice in 10 games.

If something goes wrong

Problem	What to do
"Couldn't reach the local AI model" message	Ollama isn't open. The game still works with the lie bank. Open Ollama before the next game for AI lies
Space doesn't start the round	Hide the statement first, then press Space
"Type T for truth or L for lie"	Only T or L are accepted. Type one and confirm
The page shows an error or won't load	Check the Terminal window running the game is still open. If not, start the game again
You closed the browser tab mid-game	Open http://127.0.0.1:5050/round to carry on, as long as the Terminal window is still running
